EDUCATION

- Indian Institute of Technology (IIT), Bhilai** Bhilai, India
Bachelor of Technology, Electrical Engineering; GPA: 8.46 2020 – 2024
- Narayana College** Nellore, India
Board of Intermediate Education, Andhra Pradesh; GPA: 9.94 2017 – 2020
- Sri Chaitanya School** Guntur, India
Board of Secondary Education, Andhra Pradesh; GPA: 10 2016 – 2017

TECHNICAL SKILLS

Languages: C#, Python, C++, JavaScript

Backend: .NET Core, Django, Flask, REST APIs, Microservices, Workflow Orchestration

Databases PostgreSQL, MongoDB, Kafka

Tools & Concepts: Docker, Git, Linux, Postman, Swagger, Performance Optimization

EXPERIENCE

- Rsystems International** Noida
Software Development Engineer - 1 Aug 2024 – Present
 - Built service orchestration workflows integrating multiple APIs and application services, enabling reliable cross-system data flow and parallel execution of large-scale workloads.
 - Optimized existing workflows and query logic, reducing execution time from 15 minutes to 5 minutes (**67% improvement**) and improving performance across hundreds of concurrent workflow runs.
 - Developed internal **Python utilities** to streamline workflow updates, testing, and environment transitions, cutting manual update time from 2–3 minutes to 5 seconds (**95% time reduction**) and significantly improving developer productivity.
- Jivandeep** Raipur
Machine Learning Engineer Intern May 2023 – July 2023
 - Built an **OCR + NLP pipeline** for medical document classification, achieving **92% test accuracy**.
 - Optimized data indexing for faster medical record retrieval, reducing average query time by **40%**.

PROJECTS

- Desktop Pet Productivity System**
Personal Tracking Application [Github Link](#)
Developed a Django-based backend for an agentic AI-driven desktop productivity assistant that monitors user activity (active windows, browser usage, session timing) to infer focus vs. distraction, integrating external AI APIs to drive automated reminders and task interventions.
Engineered Python background services and orchestration workflows to process real-time signals, manage task states, and coordinate adaptive productivity actions across modules.
Technologies Used: **Python, Agentic AI, Computer Vision, Javascript Browser Extensions**
- KASS Electronics Website** [Website Link](#)
MERN Full Stack Project [Github Link](#)
Developed a scalable e-commerce platform with user and vendor modules using **React.js** and **Node.js** and validated performance with Apache JMeter load testing..
Technologies Used: **React.js, Node.js, Apache JMeter, Render, Netlify, MongoDB**

ACHIEVEMENTS

Secured Top **5.3%** rank in JEE Advanced 2020 and Top **1.5%** rank in JEE Mains 2020

iHack 2022 (IIT Bhilai & Infineon Technologies) – Developed an Automatic Image Clustering solution
